# Hurricane™ Series

## Zero Turn Stand-On Blowers

Lawn Care & Maintenance Machinery

Model shown:  
X3000

Ergonomic Operator  
Platform & Thigh Pad

### Hurricane™ Series

X3000, Z3000

The Billy Goat blower range has been extended with two new stand-on models. It is a great addition to the current fleet of walk behind Force™ blowers.

The brand-new Hurricane™ Series consists of two stand-on blowers that take clean-up productivity to a whole new level. Both models provide zero turn maneuverability, rapid mount/dismount, seamless operating controls and robust blowing power.

The end result is fatigue-free operation and improved productivity for busy operators.

Both new Hurricane™ Stand-On blowers have a spacious operator platform with integrated thigh padding providing excellent comfort. The stand-on feature also allows better visibility, leading to higher quality work.

Air flow is changeable from the operator control panel in three directions - left, right and front. The patented Dual Deflector Air Flow System™ on the left side allows the operator to change the angle of the air flow for deeper, more efficient cleaning of leaves and debris.

The Hurricane™ Series accelerates the clean-up task so more jobs can be completed faster and with less wear on the operator.

### Features

#### Professional Engine

The professional Vanguard™ V-Twin engines deliver top reliability, performance and durability. Ideal for commercial applications.

#### Quad Control Handle System™

This system offers seamless forward/reverse direction, automatic return to neutral, integrated operator presence control and a self-activating parking brake. Intuitive controls for ease of operation.

#### Dual Deflector Air Flow System™

This system allows the operator to change the angle of the air flow to enhance the deep, more efficient cleaning of leaves and debris. Air flow can be shut down on all three discharges for transport.

#### Joystick Deflector Control

The joystick allows the operator full control of the air flow direction, from left, right or forward directions. Pulling back on the joystick closes all deflectors for transport.

#### LED Lights

Integrated LED lights in the operator platform allows working and loading into dusk, extending the work day.

#### Torsion Mounted Front Axle Assembly

Go over curbs or uneven terrain with ease with the torsion-mounted front axle. Bumps are softened, smoothing out the ride.

#### Front & Rear Tie Downs

Convenient tie-down points make machine transport safe.

#### Automatic Parking Brake

The Hurricane™ blowers automatically engage an internal parking brake any time the operator leaves the platform.
